Github Repository: https://github.com/tymondesigns/jwt-auth

Wiki (Installation, Configuration etc.):
https://github.com/tymondesigns/jwt-auth/wiki

Installation steps:
1) Add to composer.json (under "require")
   "tymon/jwt-auth": "0.5."*
2) Run "*composer install*" in terminal (navigated in project folder)
3) Add service provider in config/app.php file (under "providers")
   Tymon\JWTAuth\Providers\JWTAuthServiceProvider::class
4) Add façade in config/app.php file (under "aliases")
   'JWTAuth' => Tymon\JWTAuth\Facades\JWTAuth::class
5) Run "php artisan vendor:publish" to copy jwt.php file to config/jwt.php

Configuration steps:
1) Run "*php artisan jwt:generate*" to generate key to sign token
2) Edit config/jwt.php file to your needs

Protect routes/ controller actions:
1) Add middleware in controller constructor or routes.php file
2) Register middleware under used name (e.g. "jwt.auth") in app/Http/Kernel.php file under "routeMiddleware"
   'jwt.auth' =>
   \Tymon\JWTAuth\Middleware\GetUserFromToken::class
